

TASKI *exact*

Dosing platform for building care solutions

If you are looking for the benefits of super concentrates without having the possibility to connect a JohnsonDiversey dilution system to the buildings water facilities, Exact is the solution for you.

Exact consists of light weight, portable 1L dosing bottles which are refilled from 5L bag in box concentrated products.

With Exact, all your sites can benefit from environmentally friendly and cost effective concentrated products.

Flexible and Portable - no water connection

Exact dosing bottles do not require any connection to water and can therefore be used in any of your sites. Exact is also ideal for very small sites with low consumption which cannot be supplied on a regular basis.

Improves your Environmental Footprint

The Exact 5L bag in box refills the Exact dosing bottles, making the environmental impact of the dosing bottles close to zero. The bag in box has the lowest environmental footprint, due to dramatically reducing packaging waste and transport.

Simplifies your Operation

All Exact dosing bottles are equipped with a dosing cap delivering the same amount of chemical every time to help you control the consumption. The Exact platform is also fully colour coded including the products, the labels and the spray bottles to ensure easy recognition and product use.

Benefits of using Concentrates and Dosing Control

- Concentrated products improves your environmental footprint. It dramatically reduces the consumption and transport as well as the amount of plastic you need to dispose.
- Concentrated products allow for smaller packs to be used less frequently which positively impact your logistics costs by reducing the transport and storage costs while delivering in parallel excellent cost in use.
- With concentrates, the dosing aid is supplied within the chemical bottles and provides a practical and easy to use system for your staff.
